

The Wolverine Brand™ Saturation Indicator

CONTAMINANT BREAKTHROUGH INDICATOR

Superior Odor Control, Superior Quality,
Exceptional Price

Saturation Indicator

Our Saturation indicator is an easy method to detect contaminant breakthrough in a carbon bed. The indicator is constructed of a clear tube filled with a special media. This Media is a bright purple color when new and changes brown as it detects contaminants (H₂S). When the Media has completely changed to brown it can be assumed that the Carbon bed will need to be replaced soon. Simply remove the 3/4" NPT plug at the top of the Adsorber and install the saturation indicator.

**Saturation Indicator
With Sun Cover: \$50.00**
